

— INTELLIGENT AUTOMATION · AUTONOMOUS OPERATIONS

One AI operator, built into how you build.

We install a single AI operator inside your homebuilding business, configure it around how *you* run jobs, and train your team to drive it. No new app. No data migration. It works inside the tools you already use.

01 / LEARNS

Learns your business

A self-learning operator that adapts to your workflows, your trade language, and the edge cases every build throws at you.

02 / DOES

Does the work

If it has a login, an API, or an interface, the operator works inside it, from dispatch to draws to warranty tickets.

03 / REPORTS

Reports to you

On the channels you already use, text message, email, and a live dashboard. You stay in command, it does the running.
